## REASONS FOR ALLOWANCE

- The following is an examiner's statement of reasons for allowance: The present invention is directed to a method and system for compressing a digital image. Each independent claim identifies the uniquely distinct feature, "for converting a digital image into image line bit patterns by frame decomposition of an array of pixels and independently transforming each image line bit pattern into a corresponding bit mask indicator by image line encoding". The closest prior art, Pan et al. (USPN 5,793,892), disclose wherein a pixel map signal is converted into a coefficient signal of block coefficient signals, each representing the pixels in a pixel map block in a pixel map with the coefficients in a hybrid polynomial, the coefficient signal is quantized by dividing each of the coefficient values in each of the block coefficient signals by quantization factors to produce quantized coefficient values which replace the coefficient values; while Robert F. et al. (USPN 5,463,701), disclose a system and method for compressing digitized color video data by generating codes into a pattern of tables for regions in frames of the video data exhibiting certain patterns, either singularly or in combination, fail to anticipate or render the above underlined limitation obvious.

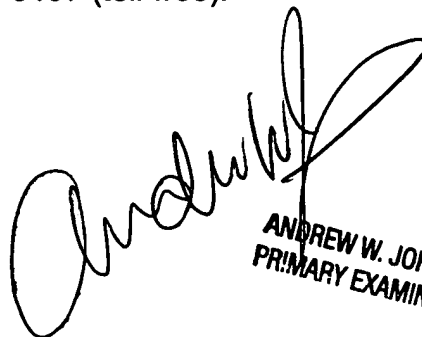

- Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
